PERMITTING ADVANCES AT MAWSON'S DON BENITO URANIUM PROJECT IN SPAIN

Vancouver, Canada – Mawson Resources Limited ("Mawson") TSXv – MAW; Frankfurt – MRY. Michael Hudson, President & CEO, announces that the final permitting process at the Don Benito uranium project has now commenced.

Spanish Mining Authorities ("Junta de Extremadura") have now requested the "Guarantee Payment" for granting ("Admisión Definitiva") of the uranium Investigation Permits that cover the Don Benito uranium project. Mawson lodged this Guarantee Payment on June 27th 2007. The Company is now confident that the final granting ("Demarcación") of the Don Benito Investigation Permits (12684-D and 12686-D) will be complete by year's end.

The Don Benito uranium claims cover the La Haba open pit uranium mine which ceased operation in 1990, and the adjacent in-situ uranium resources. The mine and resource area are currently overlain by the 3,865 hectare La Haba State Mineral Reserve. Spanish Mining Law states that on lifting of a State Mineral Reserve, the mineral rights within the State Mineral Reserve will fall to the holder of the overlying granted permits. The La Haba Mineral Reserve is currently in the process of being lifted by the National Authorities of Spain.

An interview with Mr Hudson discussing this news can be viewed at <http://mininginteractive.com/media/mawson/70619>.

Significant un-mined historic resources remain within the La Haba State Mineral Reserve, including:

- 6.0 million lbs at 0.06% U₃O₈ at a 200ppm lower cut-off,
- 3.0 million lbs at 0.1% U₃O₈ at a 600ppm lower cut-off.

The resources were calculated using a computational inverse distance method based on 3 metre horizontal benches and 40 metre square cells and is roughly analogous to the CIM definitions "Measured" and "Indicated". The depth of the resource extends from surface to 130 metres. The quoted resources are based on the PhD Thesis, "Petrology and Geochemistry of the Uranium Deposits of South East Badajoz" by Dr Javier Almarza López of the University of Seville dated March 1996. These data are historical in nature and were compiled prior to the implementation of Canadian NI 43-101 reporting standards. Mawson has not completed sufficient exploration to verify the estimates and is not treating them as National Instrument compliant resources or reserves verified by a qualified person and the historical estimate should not be relied upon. The Company believes this historical resource and the data used to compile the estimate – which represent the most recent estimates and data available – are generally reliable and relevant.

Mr Hudson states, "We are very pleased that the final granting process of the Don Benito permits has now commenced. The project is unique in that significant infrastructure is already in place including power, roads and 30 kilometers of resource drilling. Considering the imminent granting, the Company is now compiling all the past data with the aim to move to a NI43-101 compliant resource by December 2007. Concurrently, the Company will undertake a scoping study aimed at determining the potential economic scenario of reopening the Don Benito uranium. This study is slated for the first quarter of 2008."

The qualified person for the Mawson's Spanish uranium projects, Mark Saxon, Director and Vice-President of Exploration for Mawson, and a member of the Australasian Institute of Mining and Metallurgy, has reviewed and verified the contents of this release.

***About the Company:** Mawson Resources holds significant uranium resources in the nuclear energy reliant countries of Spain, Sweden and Finland. As the European Union reduces its reliance on carbon-based energy sources, Mawson is well placed as the Company develops its exploration portfolio towards the sustainable production of uranium in the shortest possible time frame.*

On behalf of the Board,

"Michael Hudson"

Michael Hudson, President & CEO
